

Synopsis

This book is Dr. Bluskov's newest installment on entertaining lotto strategies, with focus on PICK-5 lotteries. The book covers any pick-5 lottery in the world (a lottery where the main draw has 5 numbers), for example, lotteries such as 5/25, 5/35, 5/39, 5/47, etc., including Mega lotteries such as Powerball, Mega Millions, EuroMillions, Thunderball, etc. It is a book for players or groups of players, who want to play more than five numbers and more tickets in a well-organized, balanced, and entertaining way. The author has used advanced methods of combinatorics and optimization to design the most economical lottery system (wheel) for any given guarantee. Each of the explicitly given systems in his book comes with a complete table of possible wins. The lottery player will find systems with double and multiple guarantees, excellent navigational tools and presentation. This book once again defeats the common belief that the lottery is a boring game and that the only excitement comes from watching the draw and matching some of the winning numbers. It shows that choosing the right way of playing your numbers, assessing the possible wins and filling the tickets can be as entertaining as a trip to Las Vegas! Players who are interested in lotto systems for PICK-6 lotteries can check Dr. Bluskov's pick-6 book titled *Combinatorial Lottery Systems (Wheels) with Guaranteed Wins* (also at).

Book Information

Paperback: 283 pages

Publisher: Lotbook Publishing; First edition (June 28, 2011)

Language: English

ISBN-10: 0968950280

ISBN-13: 978-0968950289

Product Dimensions: 8.9 x 6 x 0.6 inches

Shipping Weight: 12 ounces (View shipping rates and policies)

Average Customer Review: 4.3 out of 5 stars [See all reviews](#) (42 customer reviews)

Best Sellers Rank: #29,932 in Books (See Top 100 in Books) #5 in [Books > Humor & Entertainment > Puzzles & Games > Gambling > Lotteries](#)

Customer Reviews

Before I bought this book I hadn't played the lottery in years. When the Mega Millions soared to over 600M or whatever, I had to trudge out late and buy a lottery ticket for my husband who was too exhausted to buy one. I wanted to hide my head as I handed the clerk my money and number choices. I don't know why. Really. Maybe I just felt awkward playing a game that seems so futile. So

I came home, lost the lottery, and got interested in the mathematics of lottery systems. I'm no mathematician. In fact, reading Ilya Bluskov's book I got a bit frustrated once he hit some of the mathematics - isomorphic copies, disjoints, and permutations. But I found if I stuck with him everything was well explained, and I was able to understand how to use this book. Here's what you need to know: All important thing... YOU have to pick the numbers. That's why his system, or anyone else's, is incapable of guaranteeing a win. But if your numbers come up, you're guaranteed to win something using his system, in most cases you'll win lots of times! So calculate birthdays, favorite ages, years, lucky numbers, or consult websites and determine the "hot" and "cold" numbers of the lottery you're playing. Now, if this is a pick 5 lottery (pick fives includes lotteries with 5 numbers, or 5 numbers plus a bonus ball(s), Mega Millions is included), and you have your five favorite numbers in mind, go to the store and buy just ONE ticket. Also, don't bother buying or reading this book. If, however, you have more than 5 numbers in mind, then you'll need a system, or "wheel" to maximize your win potential. Depending on how many numbers you picked will determine what wheel to play. Depending on how you would like to win, will determine how many tickets you want to buy.

I like to fiddle around for fun playing lotteries (and dream big, of course), but I started to wonder if there was any good information out there on this topic; I would see some people winning from time to time in the online results (even the "minor" prizes look pretty darn good to me!) and wondered if I could learn anything more about a seemingly simple long-shot guessing game. Considering available lottery books, I noted there are quite a few out there. But one large category deals with a "common sense" approach, and employs principles we all could easily come up with on our own. I will not mention any names, nor bore you with the simple techniques listed, but readers out there are aware of one such book that is WAY overpriced for what you get - nearing \$40 (OK, was reduced recently to a little under \$40), but the book is only about 36 pages of common-sense information. In fact, I was lured to this book by YouTube viewing of the author; I did not follow through with a purchase mainly because of the high-price of the book and the mediocre reviews it received. I did take some time looking through the book's information online, as well as the author's background. I basically decided this was not the approach I wanted, as I could not learn anything going down this road to improve my play. Thankfully, I happened upon Dr. Bluskov's books. In particular, I like to play a 5-draw system, as my wife and I enjoy such games as Powerball. Dr. Bluskov is more of a guy with an "uncommon sense" approach and aptitude for combinatorial mathematics! After looking through his item on Amazon, and seeing the much lower price for his book, I decided to go forward and purchase it to give it a shot.
